

Name: _____

Date: _____

Each case shows a kid's decimal work with one planted error. Circle the wrong step, check the suspect that did it, then rewrite the work correctly in the lined-up grid: decimal points stay in their column, gray helper zeroes get traced.

1. Case 1: Maya adds 0.5 + 0.25. Her answer: 0.30.

Maya's work:
0.5
+ 0.25

0.30
She stacked the numbers flush right, like whole numbers.

☐ Bug circled
SUSPECTS:
☐ Line-Up Slip
☐ Trailing-Zero Myth
☐ Place Swap
Fix (line up the decimals):
0 . 5 0
+ 0 . 2 5

 .
Gray 0s are helpers — trace them.
☐ Re-checked my fix

2. Case 2: Dev compares 1.2 and 1.20. He says 1.20 is bigger.

Dev's claim: "1.20 has more digits, so 1.20 > 1.2."
He read 1.20 as one hundred twenty and 1.2 as just twelve.

☐ Trailing-Zero Myth
☐ Place Swap
Fix:

☐ Re-checked my fix

3. Case 3: Sam writes seven hundredths for the point on the line.

The number line shows a point at 0.7.
Sam labels it: "seven hundredths, 0.07"
